Controlling Other Characters

Some non-player characters allow you to ask them to do something for you. First, speak to the character, and choose the option Can you do something for me... At the top of the screen a bar will appear which says Ask (person) to...

You can now ask the character to do something with the LOOK and TOUCH icons. If the character permits, you will also be able to access their inventory, and borrow objects, or ask them to use their inventory for you.

To finish asking the character to do something, move the mouse to the top of the screen, and choose the cross in order to control Maeldun once more.

Note: Some characters will not be willing to take orders from you.

Skipping Scenes

A Tale of Two Kingdoms has a number of cut scenes where the game is not under your control, and where you instead watch automatic scenes between the main character and other characters, or other characters interacting of their own accord.

These scenes can be skipped for players who wish to replay the game but do not want to watch the same scene again. To skip a cutscene, press ESC and wait for the game to continue at the next point of gameplay. Clicking the right mouse button will also skip the scene.

It is advisable that you do not skip cutscenes the first time you play the game, as you may miss dialogue important to parts of the game and its story.

Troubleshooting

A Tale of Two Kingdoms has been tested as thoroughly as possible, and is playable to the very end. The game does not contain 'walking dead' situations, so it is not possible to get stuck in a situation that requires you to restart the game. As long as Maeldun is alive, it is possible to reach the ending.

If you find yourself stuck on any part of the game, feel free to ask for hints and tips on the forum at our website, <http://www.crystalshard.net>

If you notice anything odd in-game, please let us know on our forum above so that we can look into the issue and rectify the problem in a future release.

The Making of Theylinn

Backgrounds were painted in Adobe Photoshop. Sketches were either made on paper first, then scanned in, or were sketched directly in Adobe Photoshop before being colored.

Portraits made with Adobe Photoshop and Photofiltre. Most portraits were drawn on paper first, then scanned and resized before colouring digitally. The same programs were used for animation.

Sprite art made in Adobe Photoshop, or MS paint

Music made with Cubase SL3.

Game made with Adventure Game Studio, © 1998-2017 Chris Jones.

For more on the making of 'A Tale of Two Kingdoms', play the game through to completion to unlock the 'Director's commentary', with several features and plenty of information about the makings of this game.
